

YOUR TURN!

Going back to the rescale function:

```
rescale <- function(x, digits = 2, na.rm = TRUE){  
  if(isTRUE(na.rm)) x <- x[!is.na(x)]  
  rng <- range(x)  
  scaled <- (x - rng[1]) / (rng[2] - rng[1])  
  round(scaled, digits = digits)  
}
```

YOUR TURN!

Going back to the rescale function add conditional statements to check and provide appropriate errors or messages for:

- *making sure **x** input is a numeric vector*
- **digits** *input is a numeric vector of one element*
- **na.rm** *input is a single logical input*
