

# FUNCTIONS TO REMEMBER

Operator/Function	Description
<code>function</code>	Create a function
<code>formals</code> , <code>body</code> , <code>environment</code>	Get anatomy of an existing function
<code>stop</code> , <code>stopif</code> , <code>message</code>	Create warnings or messages
<code>source</code>	Source a .R script (easy way to save common functions you use and access them whenever you desire)

# PRACTICE APPLYING FUNCTIONS

*Source the functions in the **03-stat-functions.R** file and practice applying these functions to each variable in the **mtcars** data set by using **map** functions.*
