SYNTAX OF A **for** LOOP

```
for(i in 1:100) {
  <do stuff here with i>
}

for(i in seq_along(x)) {
  <do stuff here with i>
}
```

For each element in a sequence
performs defined tasks

Alternative - why use seq_along?

SYNTAX OF A **for** LOOP

```
years <- 2010:2017

for (i in seq_along(years)) {
  output <- paste("The year is", years[i])
  print(output)
}
```

What does this for loop do?
